Technical Data:

Base	Vinylester styrene free		
Consistency	Stable paste		
Curing system	Chemical reaction		
(1) Cartridge temperature = 15°C (2) Curing time on dry surface (20°C/65% R.H.) (x2 on wet surface)	<u>Temperature</u> ≥ -10°C ⁽¹⁾	<u>Start</u> 90 min	<u>Full Cure</u> ⁽²⁾ 24 u
	≥ -5°C	90 min	14 u
	≥ 0°C	45 min	7h
	≥ 5°C	25 min	2 u
	≥ 10°C	15 min	80 min
	≥ 20°C	6 min	45 min
	≥ 30°C	4 min	25 min
	≥ 35°C	2 min	20 min
	≥ 40°C	1,5 min	15 min
Specific Gravity	1,77 g/cm ³		
Temperature Resistance	- 40°C to + 120°C		
Elasticity modulus	14000 N/mm ²		
Maximum bending strength	15 N/mm ²		
Maximum compression strength	100 N/mm ²		

Product:

SOUDAFIX VE400-SF is a two-component anchoring resin for the pressure-free securing of threaded rods (ETA: M8-M30), studs, reinforcement bars (ETA: Ø8-Ø32), threaded collars, profiles etc in various solid and hollow materials, such as cracked and uncracked concrete, solid brick, hollow brick, porous concrete, natural stone (see remarks), plasterboard walls, etc...

- European Technical Assessment ETA-12/0558 based on EAD 330087-00-0601 for application in post-installed rebar connections.
- Indoor air emission class A+

Application area:

Securing of heavy loads in solid and hollow building materials. Pressure free anchoring even close to edges. Can be used as repair mortar.

Characteristics:

- Easy to use and to apply
- Fast cure
- Wide application area, even in wet drill holes, under water (ne sea water) and at temp. as low as -10°C
- Overhead installation allowed
- Styrene free (low odour)
- Cartridge re-usable by simply exchanging static mixer
- Watertight and impermeable fixing
- High chemical resistance
- Fire Resistance class F120 (M8-M30)
- European Technical Assessment ETA-10/0167 based on EAD 330499-00-0601 for application in cracked and uncracked concrete.

Packaging:

Colour: dark grey after mixing
Cartridge: 280 ml cartridge for standard skeleton gun, 380 ml for use with special two-component gun.

Shelf life:

18 months in original packaging. Store at cool and dry place at temperatures between +5°C en +25°C.

Substrates:

Type: All usual porous building substrates, poor adhesion on smooth non-porous materials.
State: Clean, free of dust and grease.

Remark: The directives contained in this documentation are the result of our experiments and of our experience and have been submitted in good faith. Because of the diversity of the materials and substrates and the great number of possible applications which are out of our control, we cannot accept any responsibility for the results obtained. In every case it is recommended to carry out preliminary experiments.

SOUDAFIX VE400-SF

Revision: 25/06/2021

Page 2 of 9

Application:

Application method: standard skeleton gun for 280 ml cartridge, special 2 component gun for 380 ml, preferably heavy duty.

Application temperature: -10°C to +40°C

Clean:

Before cure: wipe off excess of product and clean afterwards with white spirit or acetone.

After cure: it is recommended to let the product fully cure, so that it can easily be removed mechanically with hammer and chisel.

Repair: with the same material

Safety recommendations:

Apply the usual industrial hygiene precautions.

Only use in well ventilated spaces.

Consult the label for more information.

Remarks:

There is a risk of staining on porous substrates such as natural stone.

Instructions for use:

- Drill hole at recommended depth
- Clean drill hole with brush and air pump thoroughly
- Screw static mixer onto cartridge
- Dispense the first 10 cm of the product to waste (on piece of cardboard) until an even colour (dark grey) is achieved, and the product is well mixed
- Solid stone: fill the drill hole from bottom up. Hollow brick: insert sleeve and fill it bottom up, so that the resin is pressed through the tiny holes of the sleeve
- Insert anchoring rod with twisting left-right motion
- Inspect the drill hole for adequate filling
- Observe hardening time. Don't move the anchoring rod during curing
- Leave the excess of product to cure as well. Remove it mechanically with hammer and chisel once cured
- Install component, applying the right torque

Remark: The directives contained in this documentation are the result of our experiments and of our experience and have been submitted in good faith. Because of the diversity of the materials and substrates and the great number of possible applications which are out of our control, we cannot accept any responsibility for the results obtained. In every case it is recommended to carry out preliminary experiments.

Characteristic bending moment	$M_{Rk,s}^0$	Nm	$1,2 \times W_{el} \times f_{t,uk}^{1)}$								
	$M_{Rk,s,eq}^0$	Nm	No performance declared								
Elastic section modulus	W_{el}	mm ³	50	98	170	269	402	785	1534	2155	3217
Partial factor	$\gamma_{Ms,V}$		$1,5^{2)}$								
Concrete pry-out failure											
Factor	k_8	-	2.0								
Installation factor	γ_{inst}	-	1,0								
Concrete edge failure											
Effective length of fastener	l_f	mm	$l_f = \min(h_{ef} ; 8 d_{nom})$								
Outside diameter of fastener	d_{nom}	mm	8	10	12	14	16	20	25	28	32
Installation factor	γ_{inst}	-	1.0								
Factor for annular gap	α_{gap}	-	$0,5 (1,0)^{3)}$								

¹⁾ f_{tk} shall be taken from the specifications of reinforcing bars

²⁾ In absence of national regulation

³⁾ Value in brackets: see ETA-10/0167

Remark: The directives contained in this documentation are the result of our experiments and of our experience and have been submitted in good faith. Because of the diversity of the materials and substrates and the great number of possible applications which are out of our control, we cannot accept any responsibility for the results obtained. In every case it is recommended to carry out preliminary experiments.
